

At Falcon Engineering 95 Pty Ltd, we regard protection of the environment to be an important aspect of our operations and good corporate citizenship. We are committed to the protection of the environment including the prevention of pollution through the adoption of sound management and operating practices.

To eliminate, control or minimise our operational footprint, we create and execute targeted environmental initiatives within our sphere of influence by:

- Reducing, re-using and recycling waste to improve sustainability of natural resources and reducing landfill.
- Lowering greenhouse gas (GHG) emissions associated with steel fabrication processes.
- Adopting sustainable practices across all operations to further mitigate our environmental impact. Storing and using all materials responsibly to reduce their potential release to the atmosphere, soil or water.
- Procuring raw materials and products from responsibly managed and ethical supply chains.
- Complying with all environmental legislation and other compliance obligations relevant to our products and activities.
- Establishing objectives and targets.
- Promoting environmental awareness amongst our workers through continuous education, encouraging participation in community initiatives, and training; and
- Ensuring that workers and suppliers conform to relevant requirements of our Environmental Management System.
- Advocating sustainable packaging across our network of workers, suppliers, and customers. Monitoring and continually improving the environmental management system to enhance environmental performance.
